# 2. Installing Kali VM

Before starting the kali virtual machine creation, download the Pre-built Kali Linux VMware image from kali official website and extract the zip file.

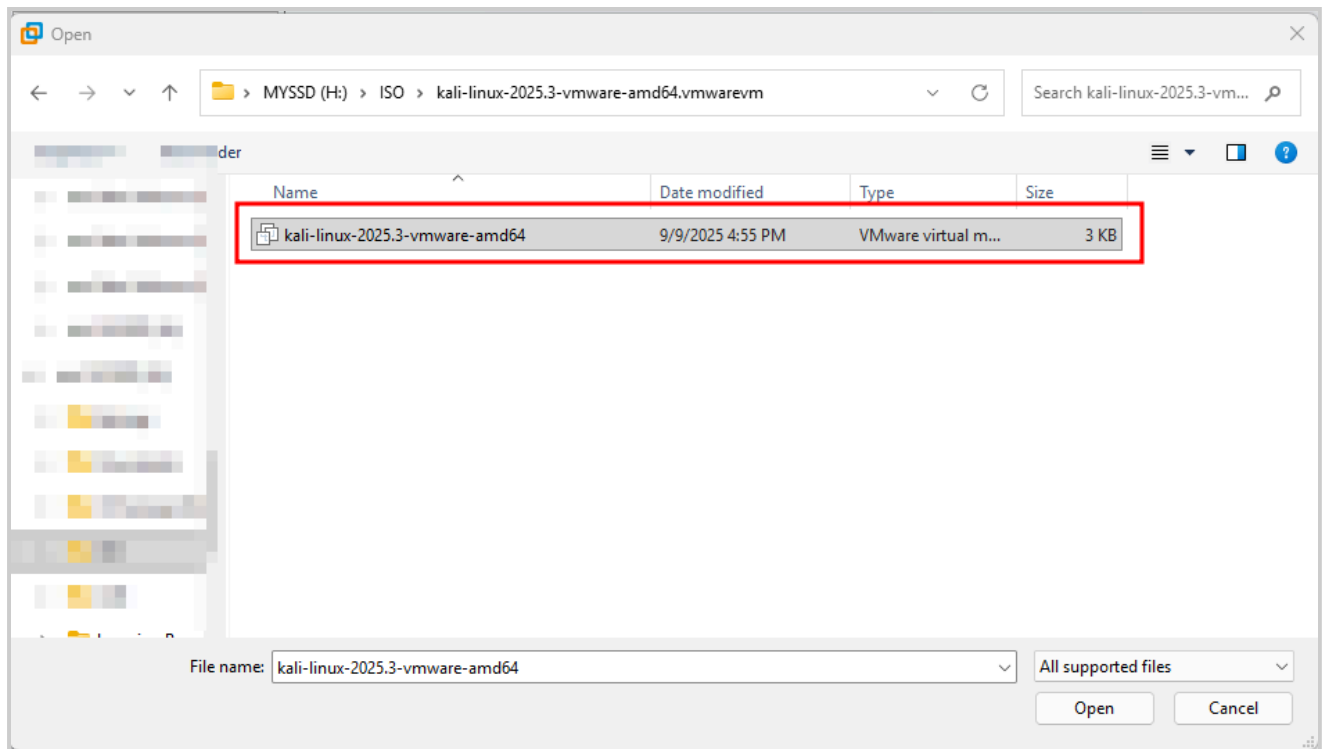

## 1. Virtual Machine Creation

1.1: Click on **File** Tab. Select **Open** from drop down menu.

1.2: Select kali VMware virtual machine configuration file and open.

1.3: After open the configure file it will show the kali virtual machine in VMware.

1.4: Now click on **Power on this virtual machine** tab. It will start the kali Virtual Machine.

1.5: After successful booting, use **user: kali** and **Password: kali** for login.
